

## GREEN, RESEARCH AND INNOVATION

Dear Customer,

**Vanetti Spa** is writing to inform you that it has set up a new in-house laboratory (its third laboratory) devoted entirely to green and **ecologically sustainable research**, allowing fully eco-friendly production processes to be offered throughout all stages of manufacturing. This step provides further confirmation of **the company's philosophy** which, thanks to its continual evolution, sees it committed in every field to respecting the environment when carrying out its activities.

**Vanetti Spa** is therefore able to provide its valued customers with a cutting-edge, reliable product that complies with environmental regulations for finished products.

The **TUV** certifications obtained for the **MTB** enlarge the range of its **Biomasterbatches®**, with registered trademark, which has been available for many years. **Vanetti Spa** also reports that it has developed a new line of Masterbatches and additives for techno polymers (created in laboratories 1-2), to obtain innovative effects, new colour shades and performance that will allow users of these products to differentiate in their own market. The three **ISO certifications (9001:2015 – 14001:2015 – 45001:2018)**, together with the new energy certification, have been obtained thanks to tireless commitment in the research of ecologically sustainable products, using high-tech, energy-saving laboratory instruments and production processes.

The company's aim, unchanged since 1971, is to provide its customers with a high quality product, to guarantee them safe use and development of high-quality end products and, above all, to create a safe product that respects the environment at all stages of production through to the finished product.
